Architecture and Planning

COURSE DESCRIPTION

A profession that combines technology, artistic expression, and freedom of creativity. Architects are employed by a variety of organizations. They live in two distinct worlds, from designing to building. An architect can enter the field of academia or production with a bachelor's degree. A specialist in this domain develops interior and exterior designs and models for business or residential infrastructures based on the needs of the client. According to statistics, the employment of urban and regional planners increased by 13% between 2012 and 2016, which was faster than the average growth for all occupations. Qualified architects and planners are in high demand due to the nation's growing development and better infrastructure, which includes housing, roads, sewer systems, parks, and schools.
